Thanks Jennifer.

The Site Characterization form is sufficient information needed for discussions with the R8 Superfund Program Division Director. I am interested to know if the listing package will be based on PFAS exposures or another contaminate.

Victor

Hi Victor, I thought I would just send an email and copy Lorie.

The site that is being proposed in the fall rule that has PFAS contamination is Blades Groundwater in Delaware. The suspected sources are two plating facilities.

Lorie-could you send Victor your draft doc record? I have also attached the Site Characterization form, but the Region has done some additional sampling since that time.
